

## CBOE Regulatory Circular RG17-064 C2 Regulatory Circular RG17-025

**Date:** April 25, 2017

**To:** PULSe Users

**From:** Business Development Division

**RE:** PULSe Trader Workstation Enhancement Release 4.4.0

A new PULSe Trader Workstation release will begin rollout during the week of April 24, 2017. PULSe users will be notified in advance of the rollout to their specific terminals. Further business functionality training will be provided before and throughout the rollout. The enhancements in this PULSe release are described below.

### Order Log and Historic Order Log

- The Account ID has been added as a filter in the current and Historic Order Log.
- Order Log and Historic Order Log exports may now be sent to multiple e-mail addresses by selecting each e-mail address from a dropdown menu. Currently, multiple e-mail addresses must be typed individually. To utilize the feature, select an email address from the dropdown menu and click the '+' symbol. The e-mail address will appear in the address field of the order details message box. Repeat the process to add each additional e-mail address.
- The "Cxl All" button display is now a preference in the current Order Log. By default, the button is displayed. To remove the "Cxl All" button, navigate to the 'gear' icon in the Order Log, Config display and clear the "Cancel All button enabled" checkbox.

### Accounts

- Manual sorting of accounts has been enhanced to include "Reset" and "Reset All" features. Selecting a sorted account from the account list and then clicking the 'Reset' button will return that account back to its default alphabetized sort. Clicking the "Reset All" button will resort all accounts to the alphabetized default.

### Manual Orders

- The Quick Trade Ticket (QT) has been enhanced to include the Manual destination. The Manual destination may be added as a destination button. To utilize this feature, click the 'gear' icon on the QT, Accounts & Destinations, select "Manual" from the dropdown list for the desired button, and select "Make Default" and "Apply".
- Manual fill prices may be entered with up to four decimal places. To utilize this feature, navigate to Settings, Order Defaults, Order Settings and select 'Use 4 decimals in manual fills'. The current default is two decimal places.

### Other Enhancements

- Pulse to PULSe (P2P) has been enhanced so that the receiver of a P2P order may create a duplicate or contra after accepting the order.
- The ORS ID will now be included in the TPH EOD reports.

### Additional Information:
